

# TimeSpot 38

The TimeSpot 38 is a modern touchscreen punch clock designed for 24/7 operation, year after year. It runs on the Linux operating system, ensuring exceptional reliability, and features an integrated web browser to display your system's time-tracking web application. The device supports multiple identification methods, including fingerprint recognition, RFID fob, pin-code, YubiKeys and Smart cards.

## Features

- Fast performance with a powerful processor for the best user experience
- Simple and clear navigation with a 15" TFT color touchscreen.
- Robust and durable for a long lifespan.
- Local storage of user data when offline
- Pre-configured upon delivery for easy startup
- Network communication via Ethernet for maximum stability and reliability.

## Service and support

- Support agreements with free repairs and software updates are available
- Report service/support issues around the clock
- 75% discount on the support agreement for the first year
- On-site support can be quoted upon request on the Nordic market.
